

Assignment – dynamic visualization

π_1	$=$	α	$P(Y)^4$	$P(\bar{L} Y)^7$	
π_2	$=$	α	$P(Y)^3$	$P(\bar{L} Y)^6$	s
π_3	$=$	α	$P(Y)^2$	$P(\bar{L} Y)^5$	s^2
π_4	$=$	α	$P(Y)$	$P(\bar{L} Y)^4$	s^3
π_5	$=$	α		$P(\bar{L} Y)^3$	s^4
π_6	$=$	α	$P(L Y)$	$P(\bar{L} Y)^2$	s^5
π_7	$=$	α	$P(L Y)^2$	$P(\bar{L} Y)^1$	s^6
π_8	$=$	α	$P(L Y)^3$		s^7

- Create an interactive stationary distribution bar chart for a Literal Automaton with eight states (see example bar chart to the left).
- Use the above equations to calculate the height of each of the eight bars.
- Create dynamic sliders for: s , $P(L|Y)$, $P(Y)$, $P(\bar{L}|\bar{Y})$. The s -slider can go from 1.0 to 25.0. The other sliders go from 0.0 to 1.0.
- Note that: $P(\bar{L}|Y) = 1.0 - P(L|Y)$ and $P(\bar{Y}) = 1.0 - P(Y)$
- Possible tool: <https://dash.plotly.com/>
